
The Practical Manual, “Practical Aspects of Forensic Medicine: A Manual for Undergraduates and General Practitioners” By Dr R.K. Gorea, T.D. Dogra, A.D. Aggarwal, is the only practical manual available not only for Undergraduate and General Practitioners but also very much useful for Post-Graduate Students as well as the upcoming Forensic Experts in India and globally. The book can be easily coded in the court of law.

The idea of publishing this manual is really very original of the authors. The quality of work is in its purest form. The conciseness of the information makes it possible to quickly search for the much needed information without losing much precious time of the reader.

The Sample reports given in the book guides the upcoming forensic medicine students to know the sharpness of writing the reports without much complications. The simplicity of showing specimen section will be very much helpful for undergraduate medical who keeps on searching for the much needed information and were confused of “what to write in one minute”.

The Forensic Science Laboratory section which gave the examination of various forensic sample is very useful for those who want to start these services in there forensic medicine department. The DNA Profiling and Acts given is also given in other book but the presentation in this book is really different from other books.

I have no hesitation to say that “This is the best practical manual I have ever seen”

Dr Imran Sabri
Assistant Professor and Forensic Expert
Acting Head of the Department
Department of Forensic Medicine
