Chapter 5: Dental Radiology Related to Pedodontics

- Teething problems and their management .................................................. 86
- Morphological characteristics of primary teeth .......................................... 87
- Differences between primary and permanent teeth .................................... 90
- Exfoliation ................................................................................................. 90
- Pattern and mechanism of deciduous tooth shedding ................................ 90
- Nerve supply for the oral cavity ................................................................. 97
- Vessels associated with the oral cavity ....................................................... 98
- Characteristics and importance of young permanent teeth ......................... 100
- Importance of first permanent molar ......................................................... 101

Chapter 6: Oral Surgical Procedures in Children

- Anatomic and physiologic concerns and general considerations in sedating a pedodontic patient ................................................................. 130
- Drugs commonly used in sedation ............................................................ 130
- Routes of administration and sedation techniques ..................................... 130
- Mild/preoperative sedation/anxiolytics .................................................... 130
- General anesthesia in children .................................................................. 130
- Management of psychological effects of hospitalization ......................... 130
- Conscious sedation .................................................................................. 132
- Nitrous oxide-oxygen mixture sedation .................................................... 132
- Dissociative sedation ................................................................................ 132
- Local anesthesia and local anesthetic agents ........................................... 132
- Topical anesthetics .................................................................................. 138
- Conventional injection techniques in maxillary and mandibular dentition 139
- Jet injection ............................................................................................... 145
- ‘WAND’ delivery system ......................................................................... 146
- Armamentarium for basic oral surgical procedures and sterilization techniques ................................................................. 146
- Indications and contraindications of tooth extraction ................................. 152
Contents

Chapter 7: Dental Caries .......................................................................................................................... 171
♦ Historical background ......................................................................................................................... 172
♦ Classification and theories of caries formation .................................................................................. 174
♦ Chemoparasitic theory ......................................................................................................................... 174
♦ Histopathological changes in dental caries ...................................................................................... 177
♦ Pathogenesis and factors influencing caries formation ..................................................................... 180
♦ Keyes triad/Caries tetralogy ............................................................................................................... 180
♦ Role of microbes in caries formation ................................................................................................. 182
♦ Window of infectivity, Stephan’s curve and critical pH level ............................................................ 182
♦ Influence of fissure morphology in caries formation ........................................................................ 186
♦ Caries pattern in primary, young permanent and permanent teeth .................................................. 186
♦ Arrested caries .................................................................................................................................... 189
♦ Affected and infected dentin .............................................................................................................. 189
♦ Childhood caries ................................................................................................................................. 190
♦ Baby bottle tooth syndrome and RIECDD ......................................................................................... 190
♦ Rampant caries .................................................................................................................................... 194
♦ Prevention schedule for high-risk caries group ................................................................................. 194
♦ Rampant caries and nursing bottle caries ......................................................................................... 197
♦ Pre-eruptive caries ............................................................................................................................... 197
♦ Incipient caries ...................................................................................................................................... 199
♦ Root caries ............................................................................................................................................. 200
♦ Role of diet in dental caries ................................................................................................................. 201
♦ ‘Sucrose—the arch criminal’ ................................................................................................................ 201
♦ Diet analysis/diet chart and dietary counseling .................................................................................. 203
♦ Caries detection—methods and recent views ...................................................................................... 207
♦ Risk assessment and dentist’s role in caries control program ............................................................. 210
♦ Caries activity tests .............................................................................................................................. 213
♦ Cariostat ............................................................................................................................................... 220
♦ Cariogram ............................................................................................................................................ 220

Chapter 8: Gingival and Periodontal Diseases in Children ........................................................................ 225
♦ Features of normal periodontium ........................................................................................................ 225
♦ Changes observed in periodontium during eruption of tooth ............................................................ 225
♦ Classification of periodontal diseases and conditions ....................................................................... 227
♦ Common gingival lesions .................................................................................................................... 227
♦ Common microbes in oral cavity ......................................................................................................... 229
♦ Microflora composition in young children and its role in plaque formation ....................................... 229
♦ Eruption gingivitis in children ............................................................................................................ 232
♦ Acute gingival diseases in children ..................................................................................................... 232
♦ Chronic marginal gingivitis ............................................................................................................... 233
### Chapter 9: Child Psychology ................................................................. 247
- Child psychology and its importance ............................................. 247
- Different schools of psychology ...................................................... 248
- Theories of child psychology .......................................................... 248
- Three levels of awareness and structural model of personality according to Sigmund Freud .................................................. 248
- Sigmund Freud theory of psychological development from birth through adolescence .................................................. 252
- Erikson’s theory of psychosocial development ................................. 255
- Cognitive developmental theory ....................................................... 260
- Classical conditioning .................................................................. 264
- Operant conditioning .................................................................... 266
- Observational learning theory ........................................................ 268
- Maslow’s theory of psychological development ............................... 269
- Mahler’s theory of personality development ................................. 270
- Psycho-orthodontic theory of motivation ....................................... 270
- Classification of child development .............................................. 271
- Oral theory of sears ...................................................................... 272
- Benjamin theory (1960) ................................................................ 272
- Emotion, its characteristics and significance .................................... 273
- Parental attitudes that affect child behavior ................................... 276

### Chapter 10: Behavior Management .................................................... 280
- Classification of child according to behavior pattern ...................... 280
- Factors that influence child behavior .............................................. 284
- Types of cry ................................................................................. 286
- Pedodontic treatment triangle ....................................................... 287
- Functional enquiry .................................................................... 288
- Behavior shaping.......................................................................... 289
- Techniques used for management of dental behavior ................... 289
- Implosion therapy .................................................................... 299
- Coping ....................................................................................... 299
- Word substitutes used for communicating with children ............. 300
- Physical assessment and its significance ....................................... 300
- Relation of emotional maturation to the dental situation ............. 301
- Intelligence quotient (IQ) assessment and its significance ........... 302
- Pharmacological methods of behavior management ................... 304
### Chapter 11: Pediatric Operative Dentistry

- Principles/guidelines in pediatric restorative dentistry: 321
- Instrumentation in pediatric restorative dentistry: 323
- Various isolation techniques: 324
- Types of clamps: 324
- Morphology and histology influencing cavity preparation: 330
- Conventional cavity preparation in primary and permanent tooth: 332
- Basic principles in cavity preparation of primary teeth: 333
- Class 1 cavity preparation for incipient lesions and pit and fissures: 334
- Matrices and wedges: 337
- Class 2 cavity preparation in primary tooth and its modifications: 340
- Tunnel preparation: 345
- Class 2 cavity preparation for amalgam and esthetic materials: 348
- Failure of amalgam restorations: 349
- Management of primary molar with multiple carious lesions: 350
- Restoration of primary anterior teeth: 356
- Sandwich technique: 361
- Prophylactic odontotomy: 363
- Enamel microabrasion: 363
- Kinetic cavity preparation/Air abrasion technique: 365
- Lamination techniques in restoration: 366
- Chemomechanical caries removal: 369
- Alternative restorative treatment/Atraumatic restorative treatment: 371

### Chapter 12: Pediatric Endodontology

- Primary pulp and its anatomic considerations and differences from permanent pulp tissue: 375
- Pulpal reactions to dental caries and during operative procedures: 377
- Classification and causes of pulpal pathology: 379
- Reversible and irreversible pulpiteis: 379
- Principles/goals of pulp therapy: 382
- Factors influencing pulp therapy: 382
- Pulp vitality tests and its recent advancements: 385
- Pulpal treatments: 389
- Importance of size of exposure and hemorrhage in deciding treatment: 389
- Pulp capping: 390
- Pulp capping agents: 390
- Treatment of deep carious lesions: 397
- Indirect pulp capping: 397
- Vital pulp therapy techniques: 400
XVIII

Chapter 13: Traumatic Injuries in Children ................................................................. 429

♦ Dental traumatology .......................................................................................... 429
♦ Etiology and predisposing factors for traumatic injuries ................................ 430
♦ Significance of diagnosing and treating traumatic injuries .......................... 430
♦ Clinical changes and sequelae of trauma ......................................................... 431
♦ Classification of traumatic injuries ................................................................ 433
♦ Examination of traumatized teeth ................................................................ 437
♦ Principles in treating dental traumatic injuries ............................................. 437
♦ Clinical features and management of teeth displacement injuries.............. 438
♦ Avulsion and its management ......................................................................... 442
♦ Emergency treatment and temporary restoration of fractured teeth
  without pulpal exposure ....................................................................................... 447
♦ Management of crown fractures ...................................................................... 449
♦ Root fracture and its management .................................................................. 452
♦ Autotransplantation .......................................................................................... 453
♦ Soft-tissue injuries, its management and prevention ....................................... 454
♦ Oral burns—causes and management ............................................................... 454
♦ Sports injuries and its preventive management .............................................. 457

Chapter 14: Preventive and Interceptive Orthodontics ............................................. 460

Section-A: Preventive Orthodontics .................................................................. 460

♦ Various preventive orthodontic procedures .................................................... 460
♦ Rationale and principles of preventive orthodontics ........................................ 460
♦ Preventive procedures without appliances ..................................................... 462
♦ Classification of space maintainers ................................................................. 464
♦ Planning space maintenance .......................................................................... 466
♦ Prerequisites of an ideal space maintainer ...................................................... 467
♦ Indications and contraindications of space maintainer .................................... 467
♦ Removable space maintainers ........................................................................ 468
♦ Types of fixed space maintainers .................................................................... 470
♦ Various space maintenance procedures according to different
  conditions or teeth areas .................................................................................. 476
♦ Mouth guard/mouth protector/gum shield ..................................................... 476

Section-B: Interceptive Orthodontics ................................................................ 478

♦ Various interceptive orthodontic procedures .................................................. 478
♦ Occlusal equilibration/Occlusal grinding ......................................................... 478

Chapter 17: Congenital and Developmental Abnormalities in Children

- Principles of genetic and developmental traits, and types of gene expression
- Influence of genetic factors on major craniofacial, oral and dental conditions
- Classification of congenital abnormalities and its management
- Developmental anomalies in craniofacial growth
- Characteristic craniofacial/dental features that help in diagnosis
- Etiology, clinical features and management of child with trisomy 21
- Classification of cleft lip and cleft palate, and its management
- Management of dental anomalies
- Natal and neonatal teeth and its management
- Ectopic eruption and its management
- Developmental anomalies in size of teeth and its management
- Developmental anomalies in shape of teeth and its management
- Developmental disturbances relating to number of teeth and its management
- Developmental disturbances in relation to structure of teeth
- Amelogenesis imperfecta and its dental management
- Early exfoliation of teeth
- Pre-eruptive coronal resorption/Pre-eruptive caries
- Intrinsic discoloration of teeth and its management
- Tetracycline discoloration
- Developmental anomalies of tongue and its management
- Abnormal labial frenum and its management

Chapter 18: Dental Emergencies in Pediatric Dental Practice

- Duties and responsibilities of a dentist during medical emergencies
- Critical steps in preparation of emergency
- Fundamental steps in emergency management
- Treatment protocols in pediatric emergency
- Emergency drugs and equipment
- Basic life support
- Emergency situations in pediatric dental practice
- Management of unconsciousness/fainting/syncope
- Management of respiratory difficulty
- Management of altered consciousness/hyper and hypoglycemic states
- Management of seizures
- Management of drug-related emergencies/allergy/anaphylaxis/drug toxicity
- Management of bleeding
- Management of chest pain
- Management of cardiac arrest

Chapter 19: Dental Materials Used in Pediatric Dentistry

- Armamentarium
- Classification of dental materials
- Pit and fissure sealants
- Classification of glass ionomer cements
- Classification of dental composites
- Composition, setting reaction, recommendations, advantages and disadvantages of dental composites
- Dentin bonding agents
- Mechanism of dentin bonding
Chapter 20: Preventive Dentistry .......................................................... 677
- Different levels of prevention .......................................................... 677
- Balanced diet and biological factors responsible for oral health .......... 679
- Healthy dietary patterns and its importance ..................................... 679
- Pediatric malnutrition and food insecurity ....................................... 681
- Nutritional considerations from infancy through adolescence .......... 686
- Plaque and its formation ................................................................ 688
- Methods of plaque control .............................................................. 688
- Sugar substitutes ............................................................................ 702
- Role of xylitol in caries prevention .................................................. 702
- Plaque control measures in special children .................................... 703
- Pit and fissure sealants ................................................................. 703
- Home care oral hygiene instructions ............................................. 707
- Caries vaccine/Modern trends in preventive dentistry ..................... 710

Chapter 21: Dental Health Education and School Dental Health Programs ........ 714
- Dental public health ..................................................................... 714
- Principles and approaches of dental health education ..................... 714
- School health program .................................................................. 715
- Indices commonly used in children ................................................. 719
- DMFT and DMFS index .................................................................. 719

Chapter 22: Fluorides ........................................................................ 728
- Historical background .................................................................. 728
- Fluoride and its pharmacokinetics in body tissues ......................... 728
- Biomechanism of fluoride as an anticariogenic agent ...................... 733
- Communal water fluoridation/Community water fluoridation ............ 734
- Dietary fluoride supplements ......................................................... 736
- Topical fluorides .......................................................................... 740
- Role of topical fluorides in prevention of caries ............................... 740
- Indications and recommended use of professionally applied topical fluorides ................................................. 748
- Professionally applied topical fluoride agents ................................ 750
- Topical and systemic fluorides ....................................................... 751
Manual of Pediatric Dentistry

Chapter 23: Case History Recording, Examination and Treatment Planning
- Significance of case history recording ........................................... 760
- Clinical examination ..................................................................... 762
- Treatment planning ...................................................................... 767

Chapter 24: Setting up of Pedodontic Clinic
- Setting up and management of dental clinic .................................. 771
- Modifications of dental clinic for special children ......................... 773
- Infection control in pediatric dental care ....................................... 773

Chapter 25: Pediatric Oral Medicine
- Eruption cyst/Eruption hematoma .................................................. 778
- Eruption sequestrum ..................................................................... 778
- Palatal and alveolar cysts of newborn/Epstein’s pearls, Bohn’s nodes and dental lamina cysts ......................................................... 778
- Alveolar abscess and its management ............................................. 779
- Periapical and periodontal abscess .................................................. 781
- Cellulitis ......................................................................................... 781
- Commonly involved space infections in children ......................... 782
- Ludwig’s angina ............................................................................ 784
- Focal sepsis .................................................................................... 784
- Common types of ulcers ................................................................ 786
- Clinical features and management of recurrent aphthous ulcer .... 786
- Recurrent aphthous ulcer ................................................................. 786
- Bacterial infections affecting oral mucosa ....................................... 788
- Clinical features and management of syphilis ............................... 788
- Common viral infections ................................................................. 790
- Clinical features and management of HSV/PHG/recurrent herpes labialis ................................................................. 790
- Common fungal infections in children .......................................... 792
- Antifungal agents ............................................................................ 792
- Oral manifestation of systemic diseases ........................................ 795
- Acrodynia ......................................................................................... 801
- Diseases that cause early exfoliation of teeth ............................... 802
- Reasons for intrinsic pigmentation of teeth ................................. 802
- Discoloration in tetracycline therapy ............................................. 802
- Developmental disorders of buccal mucosa and its management ... 802
- Various developmental anomalies of tongue .............................. 802
- Ankyloglossia and its management .............................................. 802
- Developmental disorders of floor of the mouth ......................... 802
- Cleidocranial dysostosis ................................................................. 802

Chapter 26: Drugs Used in Pediatric Dentistry
- Influence of biological maturation in pediatric pharmacology .......... 804
- Factors affecting drug dosage in children .................................... 804
- Drug dosage calculation ............................................................... 807
