## Contents

### Chapter 1: Introduction to Diagnostic Imaging Techniques in Ophthalmology

**Samuel Boyd, MD**

- Optical Coherence Tomography .......................... 1
- Optical Properties of Tissue .......................... 1
- Interpretation of OCT Images ......................... 1
- Corneal Topography ..................................... 2
- Optical Properties of the Cornea .................... 2
- Interpretation of Topographic Maps ................. 3
- Surface Curvature Measurements in Topography .... 4
  - Curve/Power Map ..................................... 4
  - Elevation Map ........................................ 4
  - Relative vs. Absolute Scales ........................ 4
- Wavefront Technology and Customized Ablations .. 5
- Ultrasound in Ophthalmology .......................... 6
- The Role of the Fluorescein Angiogram ............. 7
- Fluorescein Angiography and Filter Basics ......... 7
- Interpretation of Fluorescein Angiography .......... 8
- Electroretinogram and Electrocochleogram ........ 9
- Visual Evoked Potentials .............................. 10
- Confocal Microscopy ................................... 11

### Chapter 2: Corneal Topography

- Curvature of the Cornea ................................ 13
- Keratometry ............................................. 13
- Keratoscopy ............................................. 14
- Computerized Videokeratography ..................... 14
- ORBSI-CAN .............................................. 14
- Paraxial Optics ........................................ 15
- Raytrace or Geometric Optics ........................ 15
- Elevation .............................................. 15
- To Summarize ......................................... 15
- ORBSI-CAN I and II ................................... 15
- Specular vs Back-Scattered Reflection ............. 16
- Imaging in the ORBSI-CAN ............................ 16
- Map Colours Conventions .............................. 16
- Analysis of the Normal Eye by the ORBSI-CAN Map 17
- Analysis of Several Condition by the Orbscan Map 17
- Primary Posterior Corneal Elevation ............... 17
- Iatrogenic Keratectasia ................................ 19
- Presbyopic LASIK ..................................... 20
- ZYOPTIX Laser ......................................... 21
- Cataract Surgery ...................................... 21
- Microphakonit (Cataract Surgery through a 0.7 mm tip) 21

### Chapter 3: Wavefront and Aberrometry Analysis

**Rafael I. Barraquer, MD, PhD; Andrés Picó, OD, MD**

- The Ray Aberrations .................................. 23
  - Monochromatic Aberrations ........................ 24
  - Chromatic Aberrations .............................. 25
- Wavefronts and Wavefront Aberrations ............. 26
The Zernike Expansion 27
The Aberrations in the Normal Eye 29
Wavefront Measuring and Aberrometry 29
   Historical Background 29
   Outgoing Reflection Aberrometry (Hartmann-Shack) 30
   Retinal Imaging Aberrometry (Tscherne) 32
   Sequential Retinal Ray Tracing Aberrometry (iTrace) 33
   Ingoing Wavefront Adjustable Refractometry (Spatially Resolved Refractometer) 34
   Double Pass Aberrometry (Dynamic Skiascopy) 35
   Advantages and Limitations of the Different Aberrometry Systems 36
Wavefront Analysis, Optical Quality, and Visual Performance 37
   Quality Measures in the Spatial Domain (PSF, LSF, Strehl ratio) 37
   Quality Measures in the Contrast Domain (MTF, PTF, OTF) 38
   Wavefront Mapping Options 39
   The Root Mean Square (RMS) Error and Related Metrics 40

Chapter 4: In-vivo Micromorphology of the Ocular Coats – Confocal Microscopy Principles and Clinical Applications 47
   Prof. Dr. med. R. E. Guthoff, MD.; Joachim Stave, MD.

   Principle of In-vivo Confocal Microscopy Based on the
   Laser-Scanning Technique 47
   Slit-Scanning Techniques 48
   Fundamentals of Image Formation in In-Vivo Confocal Microscopy 50

   General Anatomical Considerations 51
   In-vivo Confocal Laser-Scanning Microscopy 52
      Confocal Laser-Scanning Imaging of Normal Structures 53
      Epithelial Layer 54
      Langerhans’ Cells 54
      Corneal Nerves 55
      Bowman’s Membrane 56
      Stroma 56
      Descemet’s Membrane 57
      Endothelial Membrane 57
      Limbal Region 57

   Clinical Findings 59
      Dry Eye 59
      Meesmann’s Dystrophy 59
      Epithelium in Contact Lens Wearers 60
      Epidemic Keratoconjunctivitis 62
      Acanthamoeba Keratitis 63
      Corneal Ulcer 63
      Slit-Lamp Photography 64
      Confocal Microscopy 64
      Refractive Corneal Surgery 64

Future Developments 65

Chapter 5: The Role of Computarized Optic Nerve Campimetry in the Early Diagnosis of Glaucoma 71
   Jerome C. Ramos-Esteban, MD

   The Reticulogeniculate Pathways 72
      A. Koniocellular (K) Pathway 72
      B. Magnocellular (M) Pathway 72
      C. Parvocellular (P) Pathway 72

   Testing the Reticulogeniculate Pathways 72
      A. Short-wavelength Automated Perimetry (SWAP) 72
         1. Technical Characteristics 73
         2. Testing Considerations 73
Diagnostic and Imaging Techniques in Ophthalmology

3. Clinical Correlations 74
B. Frequency-Doubling Perimetry (FDP)
   1. Technical Characteristics 74
   2. Testing Considerations 74
   3. Clinical Correlations 74
C. High Band-Pass Resolution Perimetry
   1. Technical Characteristics 74
   2. Testing Considerations 74
   3. Clinical Applications 74

Chapter 6: Optical Coherence Tomography (OCT) and Retinal Tomography in Glaucoma 77
Tarkan Mumcuoglu, MD.; Gadi Wollstein, MD.; Joel S. Schuman, MD.

Optical Coherence Tomography (OCT) 77
What is OCT? 77
Importance of Nerve Fiber Layer 78
Interpretation of OCT 78
Retinal Tomography 82
Interpretation of HRT 83

Chapter 7: Fluorescein and Indocyanine Green Retinal Angiography 87
J. Fernando Arevalo, MD FACS.; Dario Fuenmayor-Rivera, MD.;
Juan G. Sanchez, MD.; Renaldo A. Garcia, MD.; Lihteh Wu, MD.

Fluorescein Angiography 87
Properties of Fluorescein Dye 87
Adverse Reactions to Fluorescein Dye 88
Normal Fluorescein Angiogram 88
Abnormal Fluorescein Angiographic Patterns 89
Indocyanine Green Angiography 90
Properties of Indocyanine Green 91
Adverse Reactions to Indocyanine Green 91
Normal Indocyanine Green Angiogram 92
Interpretation of Fluorescein and Indocyanine Green Angiography
   of Selected Pathological Retinal Conditions 92
   Retinal Angiomaticous Proliferation 95
   Intraocular Tumors 96
   Chorioretinal Inflammatory Syndromes 98

Chapter 8: Ultrasonography within the Framework of Ophthalmologic Differential Diagnosis 101
Prof. Dr. med. R. F. Guthoff, MD.; Dr. rer. nat. Oliver Stacks, PhD.

Ophthalmic Ultrasonography - Past, Present and Future 101
Examination Techniques 103
Recommendations for a Rational Sequence of Examinations 103
   The Examination Procedure 103
   Principles of Obtaining the Optimal Ultrasonogram 104
   Spontaneous Motions as a Diagnostic Sign 104
   The "Critical Moment" Decides 104
   The Three-Dimensional Image 105
The Integration of B-Mode Doppler Instruments (Duplex Scanner) 107
Ultrasound Biomicroscopy 108
3D Ultrasound Biomicroscopy 109
Practical Approaches based on Ultrasonography 110
The Red Eye 110
Blurred Disk Margins - Elevation of the Optic Nerve head 112
Choroidal Folds 115
Leukokoria 116
Contents

Vitreous Hemorrhage 118
Examination before a Vitrectomy 119
Exophthalmus 121
Deficits in Ocular Motility 123
  Myogenic Deficits of Ocular Motility 123
Anterior Segment Space Occupying Lesions 125
Chamber Angle Abnormalities of Questionable Origin 126
Accommodative Artificial Intraocular Lenses – Contributions of Ultrasonography 127
  Streching Device 128

Chapter 9: Imaging of the Eye with Very High Frequency Ultrasound 133
D. Jackson Coleman, MD, FACS., Ronald H. Silverman, PhD,
Harriet O. Lloyd, M.S., Mark J. Rondeau

Principles and Physics 133
Clinical Evaluation 134
Cornea 135
Iris 136
Glaucoma 137
Ciliary Body 139
Hypotony 139
Trauma 140
Intraocular Lens Sizing 141
Advances in Ophthalmic Ultrasound Imaging 141

Chapter 10: Optical Coherence Tomography (OCT) for Exploring the Anterior Segment of the Eye 145
G. Baikoff, MD.

The Anterior Chamber OCT ("VisanteTM" Developed by Carl Zeiss Meditec) 146
Applications for Exploring the Anterior Segment with the OCT 146
  a. Static Measurement of the Anterior Segment 146
  b. Dynamic Evaluation of the Anterior Segment 147
  c. Evaluation of the Crystalline Lens with the AC OCT 147
  d. Pseudophakic Artificial Crystalline Lens 148
  e. Phakic Implants 148
  f. The Cornea 148
  g. Glaucoma 150
Conclusions and the Future of Anterior Segment OCT Exploration 150

Chapter 11: Optical Coherence Tomography 153
Soosan Jacob, MS, DNB, FRCS, MNAMS.; Sunita Agarwal, MS, DO.;
Athiya Agarwal, MD. DO., Aman Agarwal, MS, FRCS, FRCOphth

Principle of OCT 153
Color Coding in OCT 154
Interpretation of OCT of the Normal Retina 154
Interpretation of OCT of the Optic Nerve Head (ONH) 155
Scanning Protocols 155
Circumpapillary OCT Scans 155
Radial Scans Through the Optic Nerve Head 155
Macular Raster Scans 155
Macular Radial Scans 155
Quantitative Analysis Algorithms 156
Retinal Thickness Measurement 156
Nerve Fibre Layer Thickness Measurement and Analysis 156
Optic Nerve Head Analysis 156
Retinal Topography 156
OCT in Different Situations 156
# Diagnostic and Imaging Techniques in Ophthalmology

## Chapter 12: Visual Evoked Potential: Clinical Applications
