### KEY FEATURES

- The book covers prevention and control of healthcare and laboratory-associated infections in 13 sections.
- It starts with introduction and later sections covering basic science, healthcare- and laboratory-associated infections, safe practices, device management, and surveillance.
- Provides a detailed description on Infection Prevention and Control Programme, Policies and Protocols in different hospital areas and different patient populations.
- Describes standard, airborne, droplet, and transmission-based precautions.
- The book summarizes current concepts on personnel safety along with cleaning, sterilization, and disinfection; safe environment in OT and during construction; central sterilization and supplies and laundry; air, water, and food safety and outbreak management.
- Describes antimicrobials, antibiogram, antibiotic policy, and antimicrobial stewardship.
- Includes an important chapter on the ongoing pandemic of SARS COV 2 infection that deals with epidemiology, pathogenesis and prevention strategies (both in hospitals and communities) for COVID 19.
- Written by experts in simple, easy to understand language and flow charts based on the current knowledge.
- Information detailed in last two chapters and MCQs given at end of each chapter help the readers to prepare power points to train and educate the healthcare personnel.

### READERSHIP

- This tome will be useful for each and every individual engaged in providing healthcare services to practice infection prevention and control.
