### ABOUT THE BOOK

This book attempts to summarize relevant concepts and information while covering topics in enough detail to cater to higher trainees and practitioners.

### KEY FEATURES

- Written by practitioners and academicians, this volume comprises 46 detailed chapters, each written as a systematic review of contemporary literature with multiple figures and images.
- Traditional topics like management of the neck and carcinoma of unknown primary have been revisited with various guidelines and algorithmic approaches.
- Newer concepts like personalized medicine and robotic surgery have been covered in detail.
- Reconstructive surgery following ablation of head and neck cancer is covered in extensive detail with five chapters, including facial nerve reanimation.
- Chapters covering rehabilitation of head and neck cancer patients along with detailed chapters covering nutrition, anesthesia, pain management, psycho-oncology, dental oncology and nuclear medicine.
- It covers management and treatment principles from a basic level to state-of-the-art, while offering available evidence with consensus guidelines wherever possible.

### READERSHIP

- Head and neck surgical oncologists and trainees
