ABOUT THE BOOK

The third edition of the book follows the form and principles of earlier editions. All the chapters have been reviewed. Some minor changes and corrections were deemed necessary. Review questions are added at the end of histology chapters for the convenience of the students.

KEY FEATURES

- Lucid, well-illustrated and simple text for the undergraduate dental students.
- Includes detailed morphology of deciduous and permanent sets of dentition, occlusion, basic method of tooth carving, vasculature and innervations of orofacial region, maxillary sinus, basic general embryology, development of tooth, mechanism of shedding and eruption of tooth, detailed histology of enamel, dentin, pulp, cementum, alveolar bone, periodontal ligament, oral mucosa and salivary gland.
- The text contains considerable number of colored photographs, original photomicrographs, illustrations, tables and diagrams.
- This edition includes few relevant additions and questionnaire in each chapter.
